## **GENERAL TECHNICAL MANUAL**

**Sheet General: applicable to whole range**

# **TOPIC: Mains Power Supply**

### **Mains power supply to the controllers:**

All controllers sold by VERTEX have in addition to the specified voltages an optional choice of a low mains voltage input.

This is 18 ~ 32 V dc or ac

### **This is not standard supply and must be ordered specifying this option**

When using the “low voltage” ac option be aware that this is generally directly from a transformer and carries no filtering so in some cases electrical noise interference may be experienced.

Experience shows that this only happens in odd installations and is not the general rule but we cannot offer any guarantees that any one particular installation will or will not have problems.
